Who Are We?

ADOC' SOLUTIONS is a Moroccan company operating in the sector of New Information and Communication Technologies (NICT).

ADOC' SOLUTIONS wants to be a leading partner for any public administration, private company, organization etc... by proposing a panoply of products and services adapted to the requirements of our new era in order to improve the productivity and competitiveness.

Our Principles

Our philosophy of intervention relies on some principles which direct all the actions of our consultants:

- To propose and to develop powerful and economic solutions adapted to the field reality.
- To lead its interventions in conformity with the rules of deontology, the most strict standards of ethics and confidentiality.
- For a better adequacy of its interventions and for the interest of its customers, to seek co-operations with national, local or foreign consulting firms.
- To integrate the culture of the corporate customer for an effectiveness and a maximum acceptance of the suggested solutions.
- To help to better optimize the customers' resources and increase their performances, by the reduction of the maintenance and development costs of the computer applications which became a true strategic stake to face an ever increasing competition.

2. ADOC' SOLUTIONS Domains of Interventions

Domains of Interventions

Because the computer science projects are above all human projects, the computer science (Informatics) is only used to bring a technical translation to a business need.

Our goal: to allow the companies and the administrations to improve their profitability by way of Information Technology Consulting Services and the effective and rational use of Information and Communication Technologies (ICT).

Our Activities: Our Company, specialist in the Integration of Computer Science Solutions, the Electronic Document Management and the Training proposes:

- Design and Installation of the Electronic Document Management Solutions, in partnership with foreign solutions providers.
- Computer Science Projects Support: Counselling, Assistance and Realization.
- Design and Realization of Computer Applications.
- Architecture and Development of the Enterprise Information Systems.
- Web Sites Creation and Optimization.
- Various trainings to the use of Management, Information and Communication Technologies.

Thus, our job is based on 5 poles of competences:

- Electronic Document Management: [Adoc' EDM.](#)
- Information Technology Consulting Services: [Adoc' Consulting.](#)
- Data processing Engineering: [Adoc' Engineering.](#)
- Data processing Development: [Adoc' Development.](#)
- Training: [Adoc' Training.](#)

Also, to improve its sales force and to better meet the increasingly various requests of the companies and administrations with effectiveness, Adoc' Solutions owns a Software package suite (HRM, Computing Equipment Management, Vehicle Fleet Management, EDM, Printing Management, Blood Bank, Total Hospital Information System, etc...):

ADOC' EDM

Nowadays, all the companies are confronted with the increasing abundance of documents of all types and all natures. Paper is expensive to manage, it occupies an invaluable space and it is an obstacle to the improvement of the productivity. Information exists in multiple forms, on multiple supports representing of important volumes.

Moreover, the non-partageability of the hardcopy documents induces their duplication in great quantities and also increases the slowness (heaviness) of the system by the storage problem and the complexity of the research. So many elements which lead up many organizations and companies to set up an Electronic Document Management and to be equipped with powerful tools of information access.

For this purpose, Adoc' Solutions, in partnership with a foreign Provider, proposes for you a complete Solution of Electronic Document and Workflow Management, for the documents acquisition, indexing, storage, research, visualization and diffusion; thus allowing:

- Data processing in a rational and effective way.
- Group work productivity improvement.
- Increase in the Performances.

- Data Reliability & Accessibility Improvement.
- Expensive Manual Tasks Reduction.
- Fulfilment Lead Time Reduction & Responsiveness Improvement.
- Archiving Costs Reduction.
- Etc...

EDM SOLUTION: (Documalis ®)

Automatic Document Capture Secure Solution.

This Solution offers the following possibilities:

- Documents Digitization.
- Documents Acquisition and Indexing.
- Documents Storage and Conservation.
- Documents Research, Restitution and Diffusion.
- Full text Research.
- Workflow and Exchange tools allowing to automate the document diffusion process.
- Automatic Information Capture (LAD, OCR, ICR, OMR, etc....)
- Integration.

Documalis Suite version 4

Documalis is an innovating, easy-to-use solution, made up of inter-connected modules in Web technology for the acquisition, processing, certification, integration and output of the company's documents and data.

Functional Covering and Lines of Business

Administration - Banks - Insurance

- Clients files, credits, claims, openings of accounts...
- Workflows, circulation, on-line documents inquiry.
- Papers and microfilms library resources recovery.

Medical – Liberal Professions

- Patients Records, notarial deeds, plans, business folk
- Authentication, biometrics, access securisation...
- Digital signature, electronic strongbox...

E-purse – Industry – Tertiary Sector

- Accounting: Suppliers' invoices circuit automation...
- Purchases: contracts, conditions of sale and workflows of follow-up...
- Stocks: purchase orders, delivery orders, logistics, transport...
- Dematerialisation of the emitted invoices and pay slips (Certified PDF).

Documalis Range Software

The Documalis range allows to create customized solutions for each company, by assembling software components being able to be used alone or in a collaborative way.

Documalis Document Server

Document management in Web technology 2.0 offering to the user full text Google Search, by multicriteria indices, files or via hierarchical classification. The results of research are presented in text or according to vignettes in 3 sizes.

Documalis Workflow Server

Collaborative workflow server in Web technology authorizing circulation, approval, signature and indexing of documents from a simple browser. The users are warned by email with a URL of 1 click direct access to the form.

Documalis Process Server

Document and application integration server, having advanced functions for documents processing (images, OCR and PDF...), data (DBMS, Xml, files...) and work-oriented applications and specific developments.

Documalis Scanner Server

Interface of ergonomic and convivial scanning for the users using the scanners and or the connected photocopiers. Scanning of the business card in back to back A3 format, with bar code, batch processing and white pages deletion.

Documalis Communication Server

Communication servers HTTP, FTP, Web services, emails and fax, dedicated to the information receipt coming from outside and which must start a processing, a workflow or a direct integration in the document management.

Documalis Desktop Server

Documalis Desktop provides a user interface to look Office 2007 to digitize, print or deposit documents, for the purpose of a processing server for Fax mailing, documentary storage or Workflow startup.

Documalis Portal Server

Documalis Portal Server is a corporate portal in Web technology allowing the provision of work-oriented application Web screens and the execution of dynamic reports, from the users' stations of the company.

Documalis Trace Server

Server of traceability of documents, workflows, application processing, tasks automatons, input mails and fax authorizing an end to end integral traceability of information in the company. Also, it allows work-oriented data storage.

Documalis Dashboard Server

Supervision of key processes of the company: provides dashboards, alarms and a module of anomalies follow-up for Documalis software, the availability of the heterogeneous or distant servers, for any work-oriented process of the company as well.

Documalis suite is a vision turned towards the future of the office automation, document management (EDM) and company computerized management.

ADOC' CONSULTING

- **Needs Collection and analysis:**

Before starting any action, the concern for Adoc' Solutions is to understand your specific questions and needs with the objective of providing you with the adapted solutions.

- **Specifications Realization:**

Following your request, our team takes the time to quickly collect and analyze the elements necessary to meet your needs and requirements. We privilege effectiveness and listening. After the study of project and before starting the executive phase of the project, our team realizes or assists you in the project-related specifications realization.

- **Specific and adapted solutions Choice:**

The choice of the technical solutions is based on the work done by Adoc' Solutions. It is made by taking your needs and your requirements into account, beforehand analyzed as well as specifications in order to better meet your expectations.

- **Technical Advocacy (Recommendation):**

Taking advantage of its expertise, Adoc' Solutions will recommend its customized solutions. We do not stop at this stage, we privilege the communication.

ADOC' ENGINEERING

- **Project Study:**

From a project, Adoc' Solutions proposes to you to carry out the feasibility study, the implementation strategy and the folders montage.

- **Specifications Realization:**

After the project study and before starting the project executive phase, our team realizes or rather assists you in the project-related specifications realization.

- **Missions Management:**

For each project, Adoc' Solutions proposes to you a solution which is precisely adapted to your needs. Our developed solutions are specific to each request.

- **Development Management and Follow-up:**

According to your needs, Adoc' Solutions can assist you in the initial or total phase of punctual follow-up, even permanent, of your project. Adoc' Solutions collaboration is based on technical choices validation, on the assistance to recommended deployment or on the development team monitoring in the field.

ADOC' DEVELOPMENT

- **Customized Solutions Specific Developments:**

For each project, Adoc' Solutions proposes to you a solution which is precisely adapted to your needs. Our developed solutions are specific to each request.

- **Partial or Total Taking Charge of the Project :**

Thanks to our development team flexibility, we can take in charge the totality or the partiality of your development projects.

We can also intervene on certain specific points according to your request without interfering in their unfoldings.

Adoc' Solutions experience in development extends to new technologies.

We also propose to realize and take in charge for you, your electronic messaging projects, Internet/Intranet, computing equipment management and particularly Web sites development and management (specifications writing, graphic charters realization and creation, referencing, maintenance, site on-lining and follow-up...

ADOC' TRAINING

Our permanent team grows rich by the experience of several independent trainers who allow us to meet with effectiveness the increasingly various requests of the users. These teams are fully at your disposal to listen to you and to adapt solutions to your needs.

Our formula has the originality of addressing cycles made up of relevant topics; with the image of your aspirations.

Each Adoc' Training cycle is addressed to a target audience touched by an "Training action" completely adapted to its professional profile.

Software Package Suite: ADOC' Software Package

With a view to an effective and rational service, Adoc' solutions in collaboration with several foreign partners, proposes a certain number of solutions and software packages intended for the companies, thus meeting the important evolution of information technologies market:

1. Electronic Document Management Software Package.
2. Printing Management Software Package.
3. Human Resources Management Software Package.
4. Computing Equipment Management Software Package.
5. Computing Equipment Automatic Inventory Software Package.
6. Vehicle Fleet Management Software Package.
7. Patrimony Management Software Package.
8. Printing Management Software Package.
9. Medical Software Package Suite.
10. Other Software Packages.

ADOC'SOLUTIONS

Avéis-rh is a modern and simple software package to facilitate your daily life and to optimize Your human capital.

Avéis-rh enables you to manage:

- **Collaborator file, administration and History**

Employment contracts (Fixed term contract, Open-ended contract, etc),
Complementary remuneration elements (Business car, premiums, etc),
Salaries and collective agreements repository, collaborators loading,
Career history, health follow-up, competency management, etc

- **Salary Variable Elements**

Centralize in a data base all the salary variable elements.
Personalize your own pay components.
Analyze the components of your payroll, by establishment, collaborator,
and period.

- **Absences and Leaves Management**

Avéis-rh controls the vested rights for you.
Analyze your already taken leaves and plan the future requests.
Plannings of your teams and your services are available anywhere, anytime.

- **Stations, Employment and Competency Management: SECM**

Establish your job and standard employment card.
Choose your topics of analysis and your grids of evaluation for a precise management of the careers.

- **Training**

Create your trainings Catalogue related to the Competences repository.
Create and manage your training sessions and assign collaborators to them.
You control that the requests are in conformity with the vested rights.
You are alert on the requests pending answer.
Training actions plan is valuated according to educational and logistic costs as well as training salary.

- **IRT (Individual Right to Training) Management:**

Manage the collaborators' IRT counters.
Decentralize the training's and IRT requests as well as the workflow of validation among the collaborators.

- **Professional Maintenances**

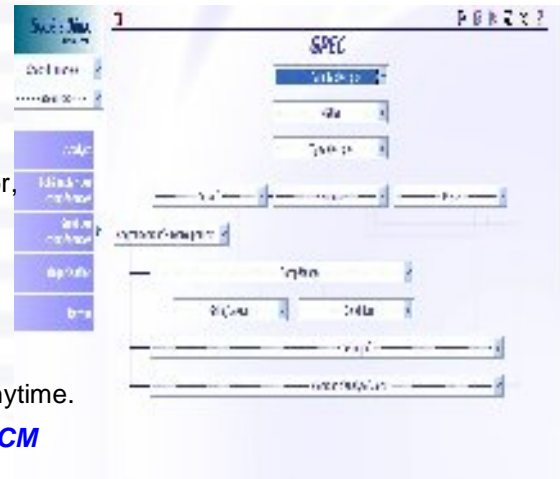

Formalize and structure this strategic exchange.
Record the data (comments, validations, etc) of the maintenances' card linked to the collaborator's file.

- **Plannings**

Manage the collaborators' plannings and services by competency and by occupation.

- **Expenses Accounts and Leaves**

Calculate and control automatically the amount of the authorized expenditure.

Validate directly and remotely the requests of reimbursements.

- **Automatic Alerts and Events**

You parameterize the content and the alert times that you wish.

Ex: Leaves application, IRT application, licence expiry, etc.

You are immediately informed of your collaborators' applications (requests).

- **Key Deliverables :**

- ❖ Collaborator file.
- ❖ Unique personnel register.
- ❖ Collaborators' directory.
- ❖ Employees' directory (Trombinoscope).
- ❖ Flow chart.
- ❖ Population pyramid (projection in the future)
- ❖ Membership reporting.
- ❖ Salaries reporting.
- ❖ SEC catalog.
- ❖ Trainings' annual balance sheet.
- ❖ IRT annual balance sheet.
- ❖ Training plan.
- ❖ Collaborator's training passport.
- ❖ Hiring (employment) form.
- ❖ Etc...

ADOC'SOLUTIONS

Gparc

To easily manage the computing equipment

A well-managed computing equipment: A stable computing and happy Users

Gparc is a field tool, both easy and rich of functionalities, designed to manage the hardware as well as their components and software: incidents, loans, stocks, guaranties, suppliers, etc.

Each component of the computing Equipment (computer, printer, software,...) can be described and managed, on the technical level as well as on the level of its management (suppliers, places, services, users, dates of guarantee, stocks or loans, etc).

A powerful, multicriterion requestor offers fast selections, printings and a precise navigation. A statistics module also proposes speaking statistical charts.

Its Help Desk and Planning functions (Incidents and interventions follow-up) complete the management aspect of this field product installed in 5 minutes.

What are the machines installed in the reception? What are the machines that have Office 2003?

Gparc was developed to answer these questions, quickly and simply. With Gparc, you will be able to follow not only the computing equipment machines, but also the suppliers, the software and the components installed or in stock, the incidents, the machines loans, etc.

Gparc is based on the following functionalities:

- To easily manage the computing equipment.
- A simple and effective database.
- Instantaneous graphic statistics.
- Help Desk, Planning tasks management.
- Etc...

Computing Equipment Inventory

i.Parc

Computing Equipment Inventory

For Windows or NT

To manage your computing equipment, Learn how to know it

i.Parc is a simple and effective software, which will enable you to explore all the computers and to discover the problems before they become urgencies. Initially, you will be able to use it just as it is, then indicate your preferences to it (more synthesis, more detail, software keys, etc).

i.Parc updates the hardware and software Inventory of your Windows or NT computing equipment by capturing the characteristics of the machines, their components and the installed software.

This collection is carried out manually or automatically (for network computers). The i.Parc Administrator easily and finely regulates the degree of the inventory accuracy and its frequency.

The inventory is available for consultation directly from the tables maintained by i.Parc, but also by the Intranet.

You can count the software, their installations, locate the versions' inconsistencies, the resources which become critical or the changes, installations or uninstallations carried out on such or such station.

No agents, nothing to install on the stations, no complex deployment.

A unique installation on a network server is enough ("Automatic Capture"). The silent execution does not bother the users.

i.Parc is based on the following functionalities:

- i.Parc : to inventory the content of the computers.
- **Software and licences management: to customize with Key software.**
- To search, sort, cross information.
- Free rubrics.
- Remote acquisition.
- Customized Alerts.
- One click access to the computing equipment graphic synthesis.
- Exploration: Entry Points.
- i.Parc reports: neat cards and lists.
- Inventory on Internet / Intranet.
- To go back in time: i.Parc History.
- Automatic and Manual capture.
- To inventory remote sites: i.Parc Multi Sites.

To manage the Vehicle Fleet with GipCar

GipCar is a software for Windows designed to ensure in a concrete and a precise way all the tasks of management, reservation and follow-up of the vehicles by the persons in charge of this activity.

The vehicle fleet management in a Company or an Administration concerns the Management of the General Means and the Financial Management as well as the technical services.

Without forgetting the users of these vehicles!

In the difference of a solution based on disparate files (spreadsheet type), GipCar database ensures the coherence between the various managed subsets: Users, Vehicles, Establishment(s), Suppliers, etc.

Functionalities included in GipCar:

- Description of the vehicle fleet.
- Intervention follow-up on vehicles.
- Service vehicles utilization follow-up.
- Documents Management associated to each vehicle.
- Vehicles Reservations Management.
- Costs Management (budgets, expenditure, amortization of the vehicles)
- Insurance Contract and Claims Management.
- Etc.

In order to ensure the biggest usability, GipCar offers edition's functions, printing assistant (requestor) and automatisms ("scenarios") for the planned production of reports and requests. Lastly, a device allows to secure the access and the rights attributed to the users.

GipCar will be integrated in your organisation:

- Data Integration: GipCar is equipped with data integration functionality i.e. of data bases supplying from existing files in your company (for example, in Excel format).

Adoc Solutions proposes to you an operation of data integration, subject to having samples of these files in order to carry out feasibility tests.

Winidmg

To manage Goods and Services, General Means and Security

WinIDMG is a software of management of Goods and Services, General Means and Security in the Bank Houses, Enterprises, Services and Administrations.

It relates to Administrative Management as well as to the Organisation Management, the engineering and general department, and the Officer in charge of Security. In fact, WinIDMG allows all the Logistics actors to control all the materials and buildings: Real estate, furniture and materials, vehicle fleet, work, reservations, etc”

The management of Goods and Services, General Means and Security includes the knowledge of the materials and buildings of a Company and their follow-up in order to ensure its efficiency.

Included Functionalities :

- **Security**
 - Telemonitoring Incidents and Management.
 - Safety Appliances Management.
 - Claims Management.
 - People’s Authorization Management.
 - Personal Identification Numbers’ management.
- **Materials**
 - Materials and Dysfunctions Management.
 - Maintenance Contracts Management.
 - Vehicle Fleet Management.
 - Bar codes Labels, Physical Inventory.
- **Real Estate**
 - Juridical and Financial Position.
 - Management of information on Acquisition.
 - Batches description.
- **Works**
 - Building sites follow-up
 - Buildings’ Technical Description.
 - Regulatory Audits
- **Finances**
 - Expenditure and Receipts
 - Budget
 - Invoices
- **Company store**
 - Items management.
 - Suppliers Orders.
 - Deliveries, invoicing, delivery slips,
 - Invoices to the entities.
- **Sites**
 - Administrative and Real Estate Information Management.
 - Cost and Contract Management and Building Sites Follow-up.
 - Photographs, plans and technical description Management.
- **Vehicle Fleet**
 - Vehicles Technical Information and Kilometrage.
 - Acquisitions, Suppliers, Insurance Contracts and Technical Controls.

- Interventions Follow-up, Utilizations and Reservations.
- **Reservations :**
 - Service Vehicle
 - Rooms: Training, meeting, box clients.
 - Specific Materials.
- **Insurance Contracts**
 - Contracts Description.
 - Claims and Contracts Management.
- **Documents**

To attach documents (texts, spreadsheet, images ...) to an element of WinIDMG (entity, supplier, material, contract, ...).
- **Suppliers**
 - Analysis of sales figures realized with the suppliers.
 - Evaluation of the quality of their benefits.
 - **Day Book**
 - Users Assistance.
 - Manual (user) or automatic registration (WinIDMG) of the outstanding shares.
 - Events Analysis allowing automatic positioning in the alert day book based on dates for which a share is to be carried out.
- **Electronic Messaging**
 - Messages manual or automatic sending by internal messaging or Internet to the recipients.
 - External messages reception.
- **Editions**
 - A catalogue of approximately 350 preprogrammed reports.
 - A printing assistant (report writing, file creation, graphics production, documents mailing, messages sending).
 - Execution scenarios: Preprogrammed reports writing at regular periods.

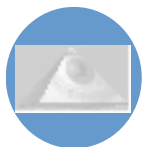

WinIDMG ensures the management known as "OF STOCK" of all these information, but also "FINANCIAL" management, thus allowing costs control and budgeting.

Neither ERP expensive and complex, nor file management system of spreadsheets without coherence, WinIDMG brings a field solution to the problems of Maintenance, Security, Contracts, Incidents, external participants, etc.

ADOC'SOLUTIONS

Printing Management

MULTIPRINT

Some functionalities:

MultiPrint is an editing and printing management software package that deals easily with the operating system's differences and which composes with all edition technologies.

MultiPrint contains all the tools which will enable you to cover the totality of your printing management needs in UNIX and Windows.

MultiPrint enables you to optimize the printers' equipment, to adapt the documents distribution and to control, in real time, all the printings of your company, anywhere in the world, from only one workstation.

MultiPrint is the ideal tool to build a completely centralized, hierarchized and secure printing service.

Indeed, **MultiPrint** is modular and upgradeable, entirely dedicated to the printing management service in distributed environment. It is composed of a range of modules designed in such way that their judicious combination, associated to a personalized parameter setting, enables it to bring a competitive printing management service which is perfectly adapted to the information system architecture and to the various modes of use (user profiles, organisational rules...) of the target environment.

Documents distribution:

- Edition or edition's portion selection following the multiple criteria.
- The selection criteria can be the title of the document, the user or any zone in the edition content.
- Editions Distribution and broadcasting towards a mailing list.
- Routing and Dispatching.
- Editions gathering for each recipient.
- Possibility of automatic printing on the recipient printer, or making the documents available for the recipients in letter-boxes, which allows the printing in demand.
- Definition of the distribution states, criteria and rules makes it possible to have a true repository of the editions.

Printers' Management:

- Network printer addressing.
- Attached printers addressing (LPT, device...)
- Printers PC addressing and sharing with flow optimization (Compression/Decompression).
- Dynamic and multiple link to the queues.
- (Pre-printed) formats management with optimized automatic or manual switching.
- Operators' management.
- Dynamic Operation Control: activity, current page, suspension, stop, start-up.
- Logical (portrait, landscape...) or physical formats (pre-printed...) management with manual or automatic change.

Queues Management

The queues allow the "spool" of an unlimited number of editions waiting for printing.

- Three dynamically modifiable filing policies (FIFO, Priority, Edition size).
- Editions order modification in the queue.
- One printer sharing.

- Dynamic addressing of a pool of printers.
- Access rights management to the queues (LCD).
- Dynamic control of the queues input/output.
- Automatic purge following a number of days.

Editions Management

- An edition can be submitted with direct printing or print spooling.
- An edition can be taken from a page or an interval of pages.
- Editions Transfer from one queue to another.
- Display (in text mode, PCL, PostScript, PDF, AFP, EMF...).
- Automatic or manual removal of the editions.
- Multicriterion search of the editions.
- User's Notification after printing.
- Suspension after printing.
- The printer's choice.
- Assignment of a logic diagram to the edition.
- Several editions' control.

Editions Display (Visualisation)

Visualization is accessible starting from the queues and archives. The MultiView tool allows visualization before printing the files in Text format, PostScript, PCL, PDF and EMF.

Files are indexed or cut out on the UNIX or Windows machine, in order to provide the user with the possibility of selecting his page numbers without loading large files on the PC.

TO BE EFFECTIVE, the user has a search for character string.

TO BE ECONOMIC, the tool enables the user to select pages to be printed and to print the new state thus constituted via its file by default or to re-send it towards another queue.

Printings' quotas Management

- Printing requests control is of primary importance for certain activities, of which the goal is the printed pages billing or the respect of a preset budget of printing.
- The consideration of printing request which makes it possible to put the job to be printed in hold in the queue printings list is always possible.
- The real editions printing in hold allows to sort and mail the editions on predefined printers, depending on the operating mode.
- The users have printing's predefined quotas.
- Each printing is then deducted from the remaining credit of the user.
- The printing quota is regarded as a fixed price with the availability and the load of the user.
- As long as his quota is not exceeded, the user can print his editions with his own way.
- Once the printing quota is exceeded, the user receives a notification indicating his quotas overrun. In this case, the printing requests are systematically put on the back burner.
- The administrator can exceptionally increase at any moment the printing quota of a user/group.
- The printing quotas are monthly. The reinitialization of the non-consumed credits is optional.
- Two operating modes:
 - Printing with predefined quotas and a credit each month.
 - Demand printing: The user submits an edition; the edition goes to the queue and remains on the back burner. The user or the administrator must relaunch it in the queue for effective printing.

Printings' statistics management

The printings statistics allow a control of the printings cost and a better management of the printers stock.

- The visualization of the history which allows to know constantly who prints what and when.
- The statistical studies of all the printings whether it is the printing server allow to analyze the printing frequency following the period, the user, the printer, etc.

- Relevant states generation (in the form of lists or graphs) which will make it possible to save the carried out studies.

Printings Archiving

- Archiving of all or part of the editions submitted to the MultiPrint server.
- Indexing of the states following the fields located in the pages of the state.
- Up to 14 index for the same state.
- Consultation via a Web user interface.
- Rerouting is possible towards another support (e-mail, backup, ...)
- Security by ACL (Access Control List).
- Archive printing partly or entirely.
- Multicriterion search (text, field, date, user, ...)
- Visualisation in text mode, PCL, PostScript and PDF.
- Archives and corresponding authorizations' management, creation and deletion.

Overlays' Management

- Paste-up of multi-pages documents forms on the mouse.
- Advanced graphics functions: frame, lines, half-tone shading, frames with curved corners.
- Data field with calculations, functions, formatting and validation.
- Function editor of calculation and validation for any element (document, page, image, text, field, graphic element, bar codes...)
- Integration of conditional and static images, monochrome and colour (TIFF, JPEG, BMP, GIF, PCX ...).
- Reformatting and enrichment of spools of ASCII edition.
- Functions of calculation and validation: date/hour string, logics, monetary, mathematic, external files read/write, Euro.
- Macrocommands of dynamic formatting of text, text flow on several pages.
- Vat paper input/output and back to back management.
- Printers' options management (Wire Stitching).

ADOC'SOLUTIONS

Medical Software Package Suite

In collaboration with a foreign partner, Adoc' Solutions proposes a certain number of solutions meant for the medical sector.

By this partnership, Adoc' Solutions multiplies its competencies and products in Morocco, in order to cover the information and communication technologies market in the medical domain, which is in the growth stage: Many medical care centers are in the process of recasting, urbanization, or modernization of their management and information system. The computing solution approach for management seems like a credible alternative and a complete solution making it possible to benefit from the quality and efficiency of our products: Adoc' Solutions proposes to you a range of software that are designed modularly with easy-to-use interfaces:

	<p>THIS (Total Hospital Information System) is an extremely effective solution that enables the healthcare entity to utilize and manage information across the entire enterprise,</p>
	<p>Netripples Blood Bank Management System is a Complete Blood Bank Management Solution that covers all the activities of a blood bank.</p>
	<p>DENTOS is a dental Practice Management software specifically for today's busy Dental clinics or Dental Hospitals</p>
	<p>DIALABS is a Diagnostic Management System, developed with the assistance of Laboratories professionals.</p>
	<p>Maternity Hospital System (MATHOS): a solution that provides Maternity hospitals with a powerful and easy-to-use management system.</p>
	<p>Paediatric System: a solution that will increase efficiency and productivity of all Paediatric Hospitals, Children Care Units and Neo-natal Hospitals.</p>
	<p>HMS (Hospital Management System): a comprehensive solution designed to automate the hospital activities.</p>
	<p>PHARMACY is a powerful software specifically designed for Pharmacies covering all the sales and transactions activities in a medical point of sales.</p>

Public Health Care System is designed specially for public health departments that require an efficient and more refined management.

Eye care System is designed for independent Eye care professionals who want to simplify the management of their practice

Other Software Packages

Software Package allowing E-mail Global Management: E-mail communication is fast, convenient and the core to many important decisions and agreements. Today, integrity is key to an organization's success or failure, and Mail Manager gives users the ability to vastly improve email integrity by substantiating who communicated what, with whom and when.

Global Project Manager's (GPM) concept is to keep the management of tasks simple while providing a global view of project status. Backed by an e-mail notification system, everyone on a project is completely informed, every step of the way.

ADOC'SOLUTIONS
